

Overview

SupaDrive Multi is a new galvanised multi-purpose fixing that is ideal for timber & steel roofing projects.

It comes with a new self drilling tip for steel purlins.

The SupaDrive Multi is designed as a single shot system, cutting a 10mm hole allowing for sufficient space for Suntuf & General Profiled Polycarbonate Roofing sheets to expand under normal conditions.

Easy to use with its single step process helping you save time.

Suitable for trade & DIY builders.

Each SupaDrive Multi box comes with 50 fixings.

Main Benefits

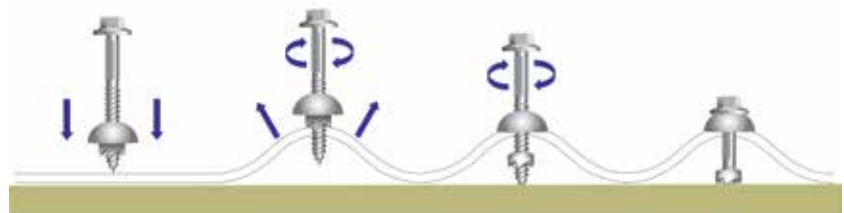

- Multi-purpose - fixes into steel & timber
- New self-drilling tip for steel purlins
- Saves time
- Single step process
- Suitable for DIY application

Typical Applications

- Canopies
- Awnings
- Carports
- Gazebos
- Pergolas
- Outdoor family areas

Installation Guide

Note: For the best performance use a variable speed drill.

1. Without drilling, use the point of the screw to compress the ridge of the sheet against the purlin.
2. Use high RPM maintaining a firm downward pressure. The screw will pierce the sheet and the ridge will pop back into original position.
3. Continue with high RPM with light pressure on the drill, allowing the saw to cut through efficiently.
4. Fasten the ridge of the sheet to a point where the rubber washers creates a tight seal.
